Ain Shams University

Study of some physical characteristics of an organic dye prepared as thin film form and its photovoltaic applications

*A thesis submitted for the degree of
Master of teacher's preparation in science
(Solid State Physics)*

By

Nourhan Abd El-Naser El-Sayed Mahmoud

Demonstrator in Physics Department
Faculty of Education - Ain Shams University

Supervised by

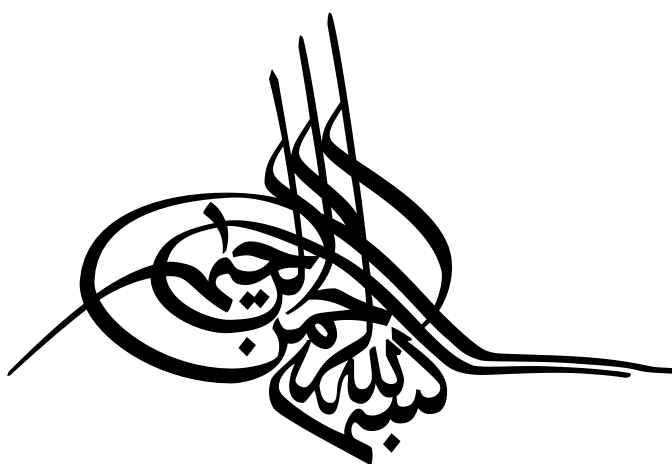

Prof.Dr. Karam Fathy Abd El-Rahman

Professor of Solid State Physics
Faculty of Education - Ain Shams University

Asst. Prof.Dr. Enass Abd El-Fattah El-Shazly
Assistant professor of Solid State physics
Faculty of Education - Ain Shams University

Asst. Prof.Dr. Gehan farouk Abdou Salem
Assistant professor of Solid State physics
Faculty of Education - Ain Shams University

2022

Approval

Student name: *Nourhan Abd El-Naser El-Sayed Mahmoud*

Thesis title: *Study of some physical characteristics of an organic dye prepared as thin film form and study its photovoltaic applications.*

Degree: *Master of teacher's preparation in science
(Solid State Physics)*

Supervisory committee

Prof. Dr. Karam Fathy Abd El-Rahman

Professor of Solid State Physics

Physics Department - Faculty of Education - Ain Shams University

Asst. Prof. Dr. Enass Abd El-Fattah El-Shazly

Assistant professor of Solid State physics

Physics Department - Faculty of Education - Ain Shams University

Asst. Prof. Dr. Gehan farouk Abdou Salem

Assistant professor of Solid State physics

Physics Department - Faculty of Education - Ain Shams University

Date of presentation 20/1/2022

List of Tables	II
List of Figures	III
Abstract	XII
Summary	XIII
Introduction	XVII

Chapter 1: Theoretical background and literature Review on organic materials

1.1	Theoretical background.....	002
1.1.1	Structural of organic semiconductor.....	002
1.1.2	Optical properties of organic semiconductor.....	002
1.1.3	Electrical properties of organic semiconductor.....	006
1.1.4	Fundamental principles of organic solar cell devices.....	022
1.2	Literature Review.....	028

Chapter 2: Experimental techniques

2.1	Material under investigation.....	065
2.2	Preparation of DBM thin films.....	066
2.2.1	Substrates surface cleaning.....	066
2.2.2	Films preparation.....	067
2.2.3	Heat treatment.....	068
2.3	Method for thin film thickness measurements.....	069
2.3.1	Quartz crystal thickness monitor	069
2.3.2	Scanning electron microscope.....	071
2.4	Structural measurements.....	072

2.4.1	X-ray diffraction (XRD) method.....	072
2.4.2	Energy dispersive X-ray analysis (EDX) method.....	074
2.4.3	Scanning electron microscope (SEM) technique.....	074
2.4.4	Differential thermal analysis (DTA) method.....	075
2.4.5	Fourier transformation infrared (FTIR) spectroscopy technique.....	067
2.5	Optical measurements.....	078
2.5.1	Transmittance, absorbance and reflectance.....	078
2.5.2	The optical constants { $n(\lambda)$ and $k(\lambda)$ } determination by computational technique.....	080
2.6	Electrical properties measurements.....	081
2.6.1	Type of electrical conductivity determination.....	081
2.6.2	Dc conductivity of the thin film.....	082
2.6.3	Thermoelectric power measurements.....	083
2.6.4	AC conductivity and dielectric properties measurements	085
2.7.	Preparation and electrical measurement of DBM/p-Si heterojunctions.....	087
2.7.1	Preparation of P-DBM/n-si heterojunction.....	087
2.7.2	Current-Voltage (I-V) measurements.....	087
2.7.3	Capacitance-voltage (C-V) measurements.....	090

Chapter 3: Structural characterization of DBM in bulk and thin-film forms

3.1	Differential thermal analysis (DTA).....	093
3.2	Fourier transform infrared spectrum (FTIR).....	093
3.3	Scanning electron microscope (SEM)	094
3.4	X-ray diffraction (XRD) of DBM powder.....	097

3.4.1 Effect of the film thickness on the structure of DBM thin films.....	097
3.4.2 Effect of the annealing temperature on the structure of DBM thin films.....	099

Chapter 4: Optical properties of DBM thin films

4.1 The spectral distribution of transmittance and reflectance of as-deposited DBM thin film	106
4.2 The spectral distribution of transmittance and reflectance of annealed DBM thin film	107
4.3 Optical constants (n and k) of DBM film	108
4.4 Absorption coefficient, energy gap and Urbach energy of DBM thin films	113
4.5 Dispersion analysis	117
4.5.1 Determination of E_0 , E_d , and ϵ_∞	117
4.5.2 Determination of ϵ_L	120

Chapter 5: Electrical Characterization of DBM in thin films and bulk forms

5.1 Type of conduction and ohmic contact	029
5.2 Dark electrical investigation	123
5.2.1 Film thickness dependence	124
5.2.2 Temperature dependence	124
5.3 AC conductivity measurement	124
5.3.1 Frequency and temperature dependence of ac conductivity.....	130

5.3.2 Frequency and temperature dependence of dielectric constant.....	134
5.3.3 Frequency and temperature dependence of dielectric loss.....	136

Chapter 6: Photovoltaic Properties of DBM Heterojunction

6.1	Dark current density-voltage (J-V) characteristics	139
6.2	Capacitance voltage characteristics	146
6.3	Photovoltaic response of the DBM/p-Si cell	149

Acknowledgement

First of all, I would like to thank **ALLAH** by the grace of whom the progress and finishing this research.

Sincere gratitude to **Prof. Dr. M. M. El Nahass** for scientific giving does not stop.

I would like to thank **Prof. Dr. Karam Fathy Abd El-Rahman**, my advisor, for suggesting his brilliant scientific ideas of this work and also for his guidance, support, understanding and patience during the past three years over this project.

Great thanks to **Ass. Prof. Dr. Gehan farouk Abdou Salem** for her help and suggestions. I would like to thank **Ass. Prof. Dr. Enass Abd El-Fattah El-Shazly** for her support and advice during my research work.

Deepest gratitude to **Dr. Magdy A. Ibrahim** and **Dr. Ahmed Ismael** for their valuable help.

I would like to thank **Prof. Dr. Alaa El-Deen Abd El-Haleem**, Head of physics Department, Faculty of Education, Ain Shams University for rendering facilities.

The assistance of my colleagues is highly appreciated.

Finally, Special thanks to **my family** for their assistance in my life.

List of Tables

Table No.	Title	Page
Table 3-1:	The position of the band in FTIR spectra of DBM powder; absorption frequencies are in cm^{-1} .	95
Table 3-2:	The calculated Miller indices hkl for DBM powder.	98
Table 3-3:	The values of the crystallite size (L), and dislocation density (δ) of as-deposited and annealed DBM films.	103
Table 4-1:	Values of E_0 , E_g^{ind} , E_d , E_{ph} , E_t , ε_∞ , ε_L and N/m^* for as-deposited and annealed film.	118
Table 5-1:	the values of activation energies ΔE_1 and ΔE_2 for different thicknesses.	127
Table 6-1:	Values of V_{bi} , N_2 and C_0 , of DBM/n-Si cell at room temperature.	149

Table 6-2:	The photovoltaic parameters of DBM/n-Si cell at room temperature.	151
Table 6-3:	Comparison of the efficiency of the solar cells manufactured from the following materials.	152

List of Figures

Figure No.	Title	Page
Figure 1.1:	<i>Relative energies of electronic transitions.</i>	6
Figure 1.2:	<i>a) The atomic s and p orbitals. (b) The molecular σ and π orbitals, formed from constructive overlap of two p_z and two p_x orbitals, respectively.</i>	9
Figure 1.3:	<i>The sp, sp^2, and sp^3 hybrid orbitals.</i>	9
Figure 1.4:	<i>The combination (a) of six hydrogen atoms and two sp^3 hybridized carbon atoms to yield the molecule ethane, (b) of four hydrogen atoms and two sp^2 hybridized carbon atoms to give ethene (ethylene), and (c) of two hydrogen atoms and two sp hybridized carbon atoms to form ethyne. The σ-bonds are shown in light gray, the two different phases of a π-bond are indicated by black and white color.</i>	11
Figure 1.5:	<i>Simple energy level diagram illustrating the formation of σ and π bonds from atomic orbitals</i>	14

	<i>for ethene. Only orbitals involved in the carbon-carbon interaction are shown. The two $2sp^2$ hybrid orbitals forming σ-bonds with hydrogen atoms are omitted.</i>
