Effect of Ginger and Thyme on Lung Function Test, Rumen fluid and Blood Constituents in Sheep

Thesis presented by

Mariam Gamal Gaid Zaki

(B.V.Sc. 2017, Faculty of Veterinary Medicine, Cairo University)

(For the Master degree in Internal Medicine)

Under supervision of

Prof. Dr. Fatma M. Abd El-Fattah Tayeb

Professor of Internal Medicine
Faculty of Veterinary Medicine
Cairo University

Prof. Dr. Taher Ahmad Mahmoud Baraka

Professor of Internal Medicine
Head of Department of Medicine and Infectious Diseases
Faculty of Veterinary Medicine
Cairo University

2020

APPROVAL SHEET

This is to approve that the dissertation presented by
candidate: Mariam Gamal Gaid Zaki, to Cairo University
entitled:

**“Effect of Ginger and Thyme on lung function test,
rumen fluid and blood constituents in sheep”**

For the Master degree of (Internal Medicine) has been approved.
Examining committee:

**Prof. Mohammed Mohamady
Ghanem**

Professor of internal medicine, and
client of Faculty of Veterinary
Medicine, University of Banha.

**Prof. Gamal Mohammed Hassan
Rhaka**

Professor of internal medicine,
Faculty of Veterinary
Medicine, Cairo University.

**Prof. Fatma Mohammed Abd-EL
Fattah Tayeb**

Professor of Internal Medicine,
Faculty of Veterinary
Medicine, Cairo University.
(Supervisor)

Dr. Taher Ahmad Mahmud Baraka

professor of Internal Medicine,
Head of Department of Medicine
and Infectious Diseases Faculty of
Veterinary Medicine Cairo
University (Supervisor).

Name: Mariam Gamal Gaid Zaki

Date of Birth: 13/4/1994

Place of birth: Egypt

Specialization: Internal Medicine

Degree: MVSC

Title of Master Thesis:

Effect of Ginger and Thyme on Lung Function Test, Rumen fluid and Blood Constituents in Sheep

Supervisors:

Prof. Dr. Fatma M. Abd El-Fattah Tayeb

Professor of Internal Medicine, Faculty of Veterinary Medicine, Cairo University

Prof. Dr. Taher Ahmad Mahmoud Baraka

Professor of Internal Medicine, Head of Department of Medicine and Infectious Diseases

Faculty of Veterinary Medicine, Cairo University

ABSTRACT

The present study was aimed to investigate normal acid-base balance, rumen, hematological, and serum biochemical parameters in apparently healthy Egyptian Ossimi sheep to be used as guideline in diagnosis of respiratory diseases in sheep, and study the effect of Ginger, Thyme and a mixture of them (1:1) respectively on acid-base balance, rumen (physical, cellular, biochemical constituents), and blood cellular and biochemical constituents to investigate the ability of further using these herbals as supportive treatment in correction of respiratory disfunction in sheep. The study carried out on 30 Egyptian clinically healthy non pregnant Ossimi ewes. Their ages ranged between 2-4 years, and their bodyweights ranged from 30 to 40kg.

Ewes divided into three groups (10 ewes in each): first group was given ginger powder (500mg/kg bwt) orally before feeding for 5 days; second group was given thyme powder (500mg/kg body bwt) orally before feeding for 5 days; third group was given ginger and thyme powder mixture (250mg/kg:250 mg/kg bwt) orally before feeding for 5 days. Samples were taken on 0, 3rd, and 5th day of the experiment in the morning before feeding. To determine the effect of mixture on rumen fermentation pattern samples were taken at 0, 2, 4, 6, and 8 hour after taking of the mixture in comparison with zero day (control) at the same hours.

Results showed that ginger powder made significant increase in rumen fluid pH, WBCS, lymphocytes, MCH and MCHC and significant decrease in total VFAs, serum total protein and globulin, while it maintained acid-base balance and other blood and rumen constituents within normal range. Thyme made significant increases in blood pH, bicarbonate, base excess, rumen fluid pH, WBCs, lymphocytes, MCH and MCHC, and significant decrease in total VFAs, TPC, and total serum protein. On the other hand, thyme maintained other blood and rumen constituents within normal range. Ginger and thyme powder mixture (1:1) did not make significant changes in rumen fermentation pattern between hours of sampling, while by days it caused significant increase in AST, and significant decrease in total VFAs, hemoglobin, and total protein. Ginger and thyme mixture powder maintained all other parameters of rumen and blood constituents.

Concerning changes in these parameters we can recommend using of last mentioned herbals supplementations as (500mg/kg bwt) orally for 5 days as supportive treatment in correction of respiratory dysfunctions, treatment of rumen and metabolic acidosis, and maintenance of normal rumen functions in sheep. Further investigation should be applied on diseased cases to confirm the effect of them in such cases.

Keywords: Sheep, *Thymus vulgaris*, *Zingiber officinale*, Powder mixture, Acid-base balance, Rumen and Blood constituents.

DEDICATION

*I like to dedicate this work to my dear
father, mother, my sister, and loosa my little
turtle who always encouraged and
supported me.*

Thank you for everything.

ACKNOWLEDGEMENT

*First of all I thank **ALLAH**, for helping me to accomplished this work.*

*I wish to express my sincere gratitude to **Prof. Dr. Fatma Mohammed Abd El-Fattah Tayeb**, Professor of Internal Medicine, Faculty of veterinary Medicine, Cairo University, for continuous supervision, valuable guidance, constant advice and continuous encouragement.*

*I would like to express my sincere appreciation and gratitude to **Prof. Dr. Taher Ahmad Mahmoud Baraka**, Professor of Internal Medicine and Head of the Department of Medicine and Infectious Diseases, Faculty of veterinary Medicine, Cairo University, for his supervision, continued encouragement, guidance and support throughout my M.V.SC studies.*

*My grateful thanks also extended to **all stuff members in Department of Medicine and Infectious Diseases**, Faculty of veterinary Medicine, Cairo University, for their great supports and facilities provided during this work.*

LIST OF TABLES

Table No.	Title	Page
First paper		
1.1	Acid-base balance parameters of apparently healthy Egyptian Ossimi sheep.	26
1.2	Physical, microscopical, and biochemical constituents of rumen fluid in apparently healthy Egyptian Ossimi sheep.	26
1.3	Hematological parameters of apparently healthy Egyptian Ossimi sheep.	27
1.4	Serum biochemical constituents of apparently healthy Egyptian Ossimi sheep.	27
Second paper		
2.1	Effect of ginger supplementation on Acid-base balance parameters on different days.	39
2.2	Effect of ginger supplementation on physical, microscopical, and biochemical constituents of rumen fluid on different days.	39
2.3	Effect of ginger supplementation on complete blood count on different days.	40
2.4	Effect of ginger supplementation on Serum biochemical constituents on different days.	40
Third paper		
3.1	Effect of thyme powder on Acid-base balance parameters on the 3 rd and 5 th day.	50
3.2	Effect of thyme powder on Physical, microscopical, and biochemical constituents of rumen fluid on the 3 rd and 5 th day.	51
3.3	Effect of thyme powder on hematological parameters on the 3 rd and 5 th day.	52
3.4	Effect of thyme powder on serum biochemical constituents on the 3 rd and 5 th day.	53
Forth paper		
4.1	Physical, chemical, and microscopical constituents of rumen fluid regarding to sampling times (0, 2 nd , 4 th , 6 th and 8 th hour) with and without ginger and thyme powder mixture.	64
