PHYSIOLOGICAL GENETIC STUDIES ON SALINITY TOLERANCE IN FABA BEAN (*VICIA FABA L.*)

THESIS

Submitted for the degree of
philosophy doctor of Science in Botany
(Genetics)

By
SAMIR HAMDY MOHAMMED ABDEL-AZIZ
(M.Sc. Botany)

supervised
By

Prof. Dr. FATTHY M. ABDEL-TAWAB
professor of Genitics,
Ain shams University

Prof. Dr. MOHAMMED A. RASHED
Professor of Gentics
Ain shams university

Prof. Dr. HASAN M. SHAMS
Professor of Botany,
Faculty of Science,
Benha

Prof. Dr. HUSSEIN. Y. OLAMA
Professor of Botany,
Faculty of Science,
Benha

ACKNOWLEDGMENT

The author wishes to express his deep appreciation and gratitude to the late **Prof. Dr. AHMED EL-BAZ YOUNIS** for his very helpful advice and sharing in preparing the research plan of this work.

The author wishes to express his sincere appreciation and gratitude to **Prof. Dr. F.M.ABDEL-TAWAB**, Professor of Genetics, Faculty of Agriculture, Ain Shams University for suggesting the topic of this work, supervising the whole experimental work and accomplishment of the thesis.

Deepest appreciation and gratefulness are due to **Prof. Dr. M.A.RASHED**, professor of Genetics, Faculty of Agriculture, Ain Shams University for his kind supervision, scientific comment and encouragement throughout the course of this work.

The author wishes to express his indebtedness to **Prof. Dr. H.M. SHAMS** professor of Botany and to **Prof. Dr. H.Y. OLAMA**, head of the Botany Department, Faculty of Science, Benha Branch, Zagazig University, for their kind supervision, and their sincere encouragement.

Sincere thanks are also due to **Dr. A. BAHIELDIN**, Department of Genetics, Faculty of Agriculture, Ain Shams University for his assistance and facilities during DNA analysis.

Acknowledgement is also extended to all members and staff of the Department of Genetics, Faculty of Agriculture, Ain Shams University, and the Department of Botany, Faculty of Science, Benha Branch, Zagazig University.

I also feel most grateful to my wife, my family for their continuous encouragement and patience.

LIST OF TABLES

Table (1): Code number and common names of the 15 cultivars of faba bean.....	34
Table (2): The nutrient solution of macro and micro elements used in the salt stress experiments.....	49
Table (3): Chemical ingrediants of Murashige and skoog's basal medium and other modified media for callus, from faba bean leaf.....	52
Table (4): Biochemical genetic fingerprints of 15 faba bean cultivars vicia faba L-by combined class patterns.....	59
Table (5): Analysis of variance of screen house experiment for 15 faba bean cultivars.....	71
Table (6): Means of days of germination for 15 faba bean cultivars under four salt concentrations (0,3000,5000, and 7000 ppm NaCl) in screen house experiment.....	72
Table (7): Means of days of flowering for 15 faba bean cultivars under four salt concentrations (0,3000, 5000 and 7000ppm NaCl), in screen house experiment.....	75
Table (8): Means of number of branches/plant for 15 faba bean cultivars under four salt concentrations (0,3000,5000 and 70000 ppm NaCl), in screen house experiment.....	77
Table (9): Means of plants height/cm for 15 faba bean cultivars under four salt concentrations (0,3000,5000 and 7000 ppm NaCl), in screen house experiment.....	80
Table (10): Means of 100-seeds weight/g for 15 faba bean cultivars under four salt concentraions (0, 3000,5000 and 7000 ppm NaCl), in screen house experiment.....	82

Table (11): The classification of screen house experiment data according to Duncan's analysis for 15 faba bean cultivars under four salt concentrations (0, 3000, 5000 and 7000 ppm NaCl) as salt treatments.....	85
Table (12): The average values of callus weight/g for six faba bean cultivars growing on MS medium supplemented by 2mg/L NAA, 1mg/L kinetien and 0.5 mg/L BA, treated with different levels of sodium chloride (0,3000, 5000 and 7000 ppm NaCl).....	112
Table (13): Comparison of proline levels for six faba bean cultivars (callus) adapted to (3000, 5000 and 7000 ppm NaCl) in Ms medium and control callus growing on the same medium without salt.....	121

LISTES OF FIGUERS

Fig (1): Standard curve of proline	53
Fig.(2): SDS-PAGE Profiles in seeds protein patterns for 15 faba bean cultivars.....	56
Fig. (3): SDS erectrohoregrams in seeds for 15 faba been cultivars.	
Fig. (4): Electrophoretic patterns of Esterase isozymes in seeds for 15 faba beencultivars.....	57
Fig.(5):Esterase isozymes zymograms in seeds for 15 faba been cultivars.....	60
Fig.(6):Peroxidase isozymes zymograms in seeds for 15 faba been cultivars.....	62
Fig.(7): Peroxidase isozymes zymograms in seeds for 15 faba bean cultivars.....	62
Fig.(8): Electrophoretic patterns of GOT isozymes in seeds for 15 faba bean cultivars.....	64
Fig.(9): GOT isozymes zymograms in seeds for 15 faba bean cultivars. .	64
Fig.(10): Electrophoretic patterns of LAP isozymes in seeds for 15 faba bean cultivars.....	66
Fig.(11): LAP isozymes zymograms in seeds for 15 faba bean cultivars.	
Fig.(12): Electrophoretic patterns of IPO isozymes in seeds for 15 faba bean cultivars.....	68
Fig.(13): IPO isozymes zymograms in seeds for 15 faba bean cultivars...	68
Fig.(14): Histograms showing the effect of four salt concentration on days of germination /days for 15 faba bean cultivars.....	73
Fig.(15): Histograms showing the effect of four salt concentration on days of flowering for 15 faba bean cultivars.....	76
Fig. (16): Histograms showing the effect of four salt concentration on number of branches/plant for 15 faba bean cultivar.....	78
