Menoufiya University
Faculty of Medicine
Neurosurgery Department

Study of complications after minor head Injury

Thesis
Submitted for Partial Fulfillment of Master Degree
In
General Surgery

By
Haitham El-Beltagy Abd El-Kader
(M.B., B.Ch.)

Supervised by

Prof. Dr. Samir Mohamed Hanafy Kohla

Professor of General Surgery
Faculty of Medicine- Menoufiya University

Dr. Amer Ahmad Tantawy

Assistant Professor and Head of Neurosurgery Department
Faculty of Medicine- Menoufiya University

Dr. Mohamed Safwat Ibrahim

Assistant Professor of Neurosurgery
Faculty of Medicine- Mansoura University

Faculty of Medicine
Menoufiya University
2001

صدق الله العظيم

"سورة طه آية ١١٤"

Acknowledgment

Praise to ALLAH, the master of the world, most gracious, most merciful.

For this work and for my debut and hopefully my continuing practice as a surgeon, I am indebted to a person who was more a father than a supervising professor. Who was always added to my character, be that through his vast knowledge, wise encouragement or by stern discipline me when I was tempted to stray sometimes! For this I thank you my dear Prof. Dr. **Amer Ahmad Tantawy**, Head of Neurosurgery Department, Menoufiya Faculty of Medicine.

Neither this work nor my being a surgeon would be has been realized except for one person whom had attempted to follow in his wake came to know! Who had taught me the most about surgery, but most importantly about life. To you my dear Prof. Dr. **Samir Mohamed Hanafy Kohla**, Professor of General Surgery, Menoufiya Faculty of Medicine.

It gives me a great pleasure to express my sincere gratitude and deep appreciation to Prof. Dr. **Mohamed Safwat Ibrahim**, Assistant Professor of Neurosurgery, Mansoura Faculty of Medicine for his continuous encouragement and supervision throughout the completion of this work.

A fruit does not thank the tree for bearing it, but I must express in the very least a tiny bit of gratitude to the very reason of my existence. To my father and mother, I hope that I was able to fulfill a fraction of your expectations.

Last but not least I would like to express my appreciation to the staff and personnel of the Neurosurgery department, faculty of medicine, Menoufiya University, for the very stimulating experiences I enjoyed in their midst.

Haitham El-Beltagy

Contents

Items	Page
• Introduction	1
• Aim of the work	2
• Review of literature	3-54
□ Historical background	3-4
□ Gross anatomy of the brain	5-16
□ Physiological considerations.....	17-19
□ Biomechanics of head injuries	20-28
□ Definitive diagnosis.....	29-36
□ Management of head injuries	37-47
□ Prognosis of head injuries	48-50
□ Outcome of minor head injury	51-52
□ Complications of minor head injury	53-54
• Patients and methods	55-61
• Results	62-110
• Discussion.....	111-121
• Summary and conclusions.	122-123
• References	124-134
• Arabic summary	

List of tables

Table (1): shows distribution of age and sex of studied patients with minor head injury, page (65).

Table (2): shows mechanism of minor head injury in studied patients, page (68).

Table (3): shows distribution of studied minor head injury patients according to Glasgow Coma Scale (G.C.S), page (70).

Table (4): shows associated medical disorders in studied minor head injury patients, page (72).

Table (5): shows number and percent distribution of different lines of management of complications after minor head injury, page (74).

Table (6): shows number and percent distribution of different complications in studied minor head injury patients, page (76).

Table (7): shows Glasgow Outcome Score (G.O.S) of studied minor head injury patients, page (78).

Table (8): shows relationship between age in years of studied minor head injury patients and type of complications, page (80).

Table (9): shows relationship between sex of minor head injury patients and type of complications, page (82).

Table (10): shows relationship between mechanism of head injury and type of complications, page (84).

Table (11): shows relationship between line of management and type of complication in studied minor head injury patients, page (86).

Table (12): shows relationship between Glasgow Coma Scale (G.C.S) of studied minor head injury patients and type of complications, page (88).

Table (13): shows relationship between sex of studied minor head injury patients and Glasgow Outcome Score (G.O.S), page (91).

Table (14): shows relationship between mechanism of injury and Glasgow Outcome Score (G.O.S) in studied minor head injury patients, page (93).

Table (15): shows relationship between type of complication and Glasgow Outcome Score (G.O.S) in studied minor head injury patients, page (95).

Table (16): shows relationship Glasgow Coma Score (G.C.S) in studied minor head injury patients, page (97).

Table (17): shows relationship between Glasgow Outcome Score (G.O.S) and type of management in studied minor head injury patients page (99).

Table (18): shows relationship between concomitant medical disorders and Glasgow Outcome Score (G.O.S) in studied minor head injury patients, page (101).

List of figures

Figure (1): shows medial view of right half of the brain, from **Wilkinson**, atlas of neurosurgery, 3rd edition, 1992, page (6).

Figure (2): show cranial dural venous sinuses, from surgical atlas by **Anson and McVay**, 6th edition, 1984, page (8).

Figure (3): shows interior of the skull drowns from atlas of human brain by **John et al.**, 3rd edition, 1995, page (12).

Figure (4): shows arterial supply of the brain, from surgical atlas by **Anson and McVay**, 6th edition, 1984, page (12).

Figure (5): shows shape and relationships of the dural reflections, the cerebellum and part of left cerebral hemisphere, drown from a dissection by **Gray Jenison**, 1984, page (14).

Figure (6): shows extradural haematoma, from **Ellis H& Calne R**, lecture notes in General Surgery, 8th edition, 1993, page (26).

Figure (7): shows subdural haematoma, from **Ellis H & Calne R**, lecture notes in General Surgery, 8th edition, 1993, page (26).

Figure (8): shows encapsulated chronic subdural haematoma, from **Ellis H & Calne R**, 8th edition, 1993, page (29).

Figure (9): shows the skin flap for evacuation of acute extradural haematoma, from **Wilkinson**, atlas of neurosurgery, 3rd edition, 1992,page (43).

Figure (10): shows temporal craniotomy and dural opening for decompression of the haematoma, from **Wilkinson**, atlas of neurosurgery, 3rd edition, 1992, page (43).

Figure (11): shows the bone flap for evacuation of the haematoma, from **Wilkinson**, atlas of neurosurgery, 3rd edition, 1992, page (45).

Figure (12): shows the dural flap and evacuation of acute subdural haematoma, from **Wilkinson**, atlas of neurosurgery, 3rd edition, 1992, page (45).

Figure (13): shows removal of an extradural haematoma, from **Ellis H & Calne R**, lecture notes in General Surgery, 8th edition, 1993, page (46).

Figure (14): shows cerebral contusions located on the surface of anterior and inferior frontal lobes, from **Ellis H & Calne R**, 8th edition, 1993, page (47).

List of Graphics

Graph (1 a): shows age of studied patients with minor head injury, page (66).

Graph (1 B): shows sex of studied patients with minor head injury, page (67).

Graph (2): shows mechanism of minor head injury in studied patients, page (69).

Graph (3): shows distribution of studied minor head injury patients according to G.C.S, page (71).

Graph (4): shows associated medical disorders in studied minor head injury patients, page (73).

Graph (5): shows number and percent distribution of different lines of management of complications after minor head injury, page (75).

Graph (6): shows number and percent distribution of different complication in studied minor head injury patients, page (77).

Graph (7): shows Glasgow outcome score of studied minor head injury patients, page (79).

Graph (8): shows relationship between age in years of studied minor head injury patients and type of complications, page (81).

Graph (9): shows relationship between sex of minor head injury patients and type of complications, page (83).

Graph (10): shows relationship between mechanism of head injury and type of complications, page (85).

Graph (11): shows relationship between line of management and type of complications in studied minor head injury patients, page (87).

Graph (12): shows relationship between G.C.S of studied minor head injury patients and type of complications, page (89).

Graph (13): shows relationship between sex of studied minor head injury patients and G.O.S, page (92).

Graph (14): shows relationship between mechanism of injury and G.O.S, in studied minor head injury patients, page (94).

Graph (15): shows relationship between type of complications and G.O.S in studied minor head injury patients, page (96).

Graph (16): shows relationship between G.C.S and G.O.S in studied minor head injury patients page (98).

Graph (17): shows relationship between G.O.S and type of management in studied minor head injury patients, page (100).

Graph (18): shows relationship between concomitant medical disorders and G.O.S in studied minor head injury patients, page (102).
