*Alterations in the Activity of Some Carcinogen-  
Metabolizing Enzymes After Treatment with  
Various N-nitroso compounds*

B18 378

*A Thesis Submitted in Partial Fulfillment for  
Master Degree in Bioscience & Technology*

*Presented by*

*Sherine shawky Salem Moustafa Fayad*

(B.Sc. in Biochemistry / Chemistry)  
Alexandria University

Department of Bioscience & Technology,  
Institute of Graduate Studies & Research  
Alexandria University

1999

# **Supervisors**

**Prof. Mohamed Salah El-Dein Hassouna**

Professor of Microbiology, Department of  
Environmental Studies, Institute of Graduate  
Studies & Research, Alexandria University.

**Dr. Salah Ahmed Sheweita**

Lecturer of Biochemistry, Department of  
Bioscience & Technology, Institute of Graduate  
Studies & Research, Alexandria University.

Alteration in the Activity of some Carcinogen-Metabolizing  
Enzymes After Treatment with Various N-nitroso compounds.

APPROVED

A. Sofian

Sham S. Shams

Salah Hassan

Date 28 / 1 / 1999 Alexandria, Egypt.

*To The Soul  
of my Mother*

# Acknowledgement

### **Acknowledgments**

*I would like to thank Professor Mohamed Salah El-Dein Hassouna, Professor of Microbiology, Department of Environmental Studies, Alexandria University, Egypt. For providing the perfect environment in my quest for Knowledge. Under his supervision, I found that it could be fun to work and learn at the same time. It is impossible for me to express the gratitude I feel, for his guidance, support, knowledge and enthusiasm.*

*I am grateful to many people who helped me achieve the completion of this work. I want to thank Dr. Salah Ahmed Sheweita, Lecturer of Biochemistry, Department of Bioscience & Technology, Alexandria University, for his continual support of my efforts during the good times and the more difficult ones. He was the ideal mentor, the P.I. that graduate students dream of having. He encouraged me to work independently, which gave me the opportunity to make my own mistakes. From this mistakes. I have learned, and as a result I am a better scientist.*

*I would like to thank Mr. Mohammed Salem and Mrs. Nema Mahmoud and Mrs. Suzanne El-Sayed and all nice people for their helping during the experimental work.*

# List of Tables

Number of table	Page
1. Effect of dibutyl nitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the hepatic content of microsomal protein.....	46
2. Effect of ethylbutyl nitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the hepatic content of microsomal protein.....	47
3. Effect of propylbutyl nitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the hepatic content of microsomal protein.....	48
4. Effect of methylpropyl nitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the hepatic content of microsomal protein.....	49
5. Effect of ethylmethyl nitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the hepatic content of microsomal protein.....	50
6. Effect of diphenyl nitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the hepatic content of microsomal protein.....	51
7. Effect of dibutyl nitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the hepatic content of cytochrome P-450 in the mice liver.....	55
8. Effect of ethylbutyl nitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the hepatic content of cytochrome P-450 in the mice liver.....	56

9. Effect of propylbutylnitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the hepatic content of cytochrome P-450 in the mice liver.....57
10. Effect of methylpropylnitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the hepatic content of cytochrome P-450 in the mice liver.....58
11. Effect of ethylmethylnitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the hepatic content of cytochrome P-450 in the mice liver.....59
12. Effect of diphenylnitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the hepatic content of cytochrome P-450 in the mice liver.....60
13. Effect of dibutylnitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the activity of aryl hydrocarbon hydroxylase of the mice liver.....65
14. Effect of ethylbutylnitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the activity of aryl hydrocarbon hydroxylase of the mice liver.....66
15. Effect of propylbutylnitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the activity of aryl hydrocarbon hydroxylase of the mice liver.....67
16. Effect of methylpropylnitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the activity of aryl hydrocarbon hydroxylase of the mice liver.....68
17. Effect of ethylmethylnitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the activity of aryl hydrocarbon hydroxylase of the mice liver.....69
18. Effect of diphenylnitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the activity of aryl hydrocarbon hydroxylase of the mice liver.....70

19. Effect of dibutyl nitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the hepatic content of cytochrome b <sub>5</sub> of the mice liver.....	74
20. Effect of ethylbutyl nitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the hepatic content of cytochrome b <sub>5</sub> of the mice liver.....	75
21. Effect of propylbutyl nitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the hepatic content of cytochrome b <sub>5</sub> of the mice liver.....	76
22. Effect of methylpropyl nitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the hepatic content of cytochrome b <sub>5</sub> of the mice liver.....	77
23. Effect of ethylmethyl nitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the hepatic content of cytochrome b <sub>5</sub> of the mice liver.....	78
24. Effect of diphenyl nitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the hepatic content of cytochrome b <sub>5</sub> of the mice liver.....	79
25. Effect of dibutyl nitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the activity of NADPH cytochrome C reductase of the mice liver.....	83
26. Effect of ethylbutyl nitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the activity of NADPH cytochrome C reductase of the mice liver.....	84
27. Effect of propylbutyl nitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the activity of NADPH cytochrome C reductase of the mice liver.....	85
28. Effect of methylpropyl nitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the activity of NADPH cytochrome C reductase of the mice liver.....	86
29. Effect of ethylmethyl nitrosamine after single (1h) and repeated doses (three consecutive days) treatments on the activity of NADPH cytochrome C reductase of the mice liver.....	87
